Female

60% female are affected by UI between the ages of 45 and 55

Male

15% male are affected by UI over the ages of 60

Urinary Incontinence (UI) — the loss of bladder control — is a common and often embarrassing problem. It is a symptom that is caused by a variety of things, including childbirth, pregnancy, aging, hysterectomy menopause and neurological disorders

Women

Pregnancy

Childbirth

Hysterectomy

Menopause

Men

Prostate Problems

Bladder Damage

Urinary Stones

Sphincter Problems

Both Men & Women

Aging

Neurological disorders

Obesity

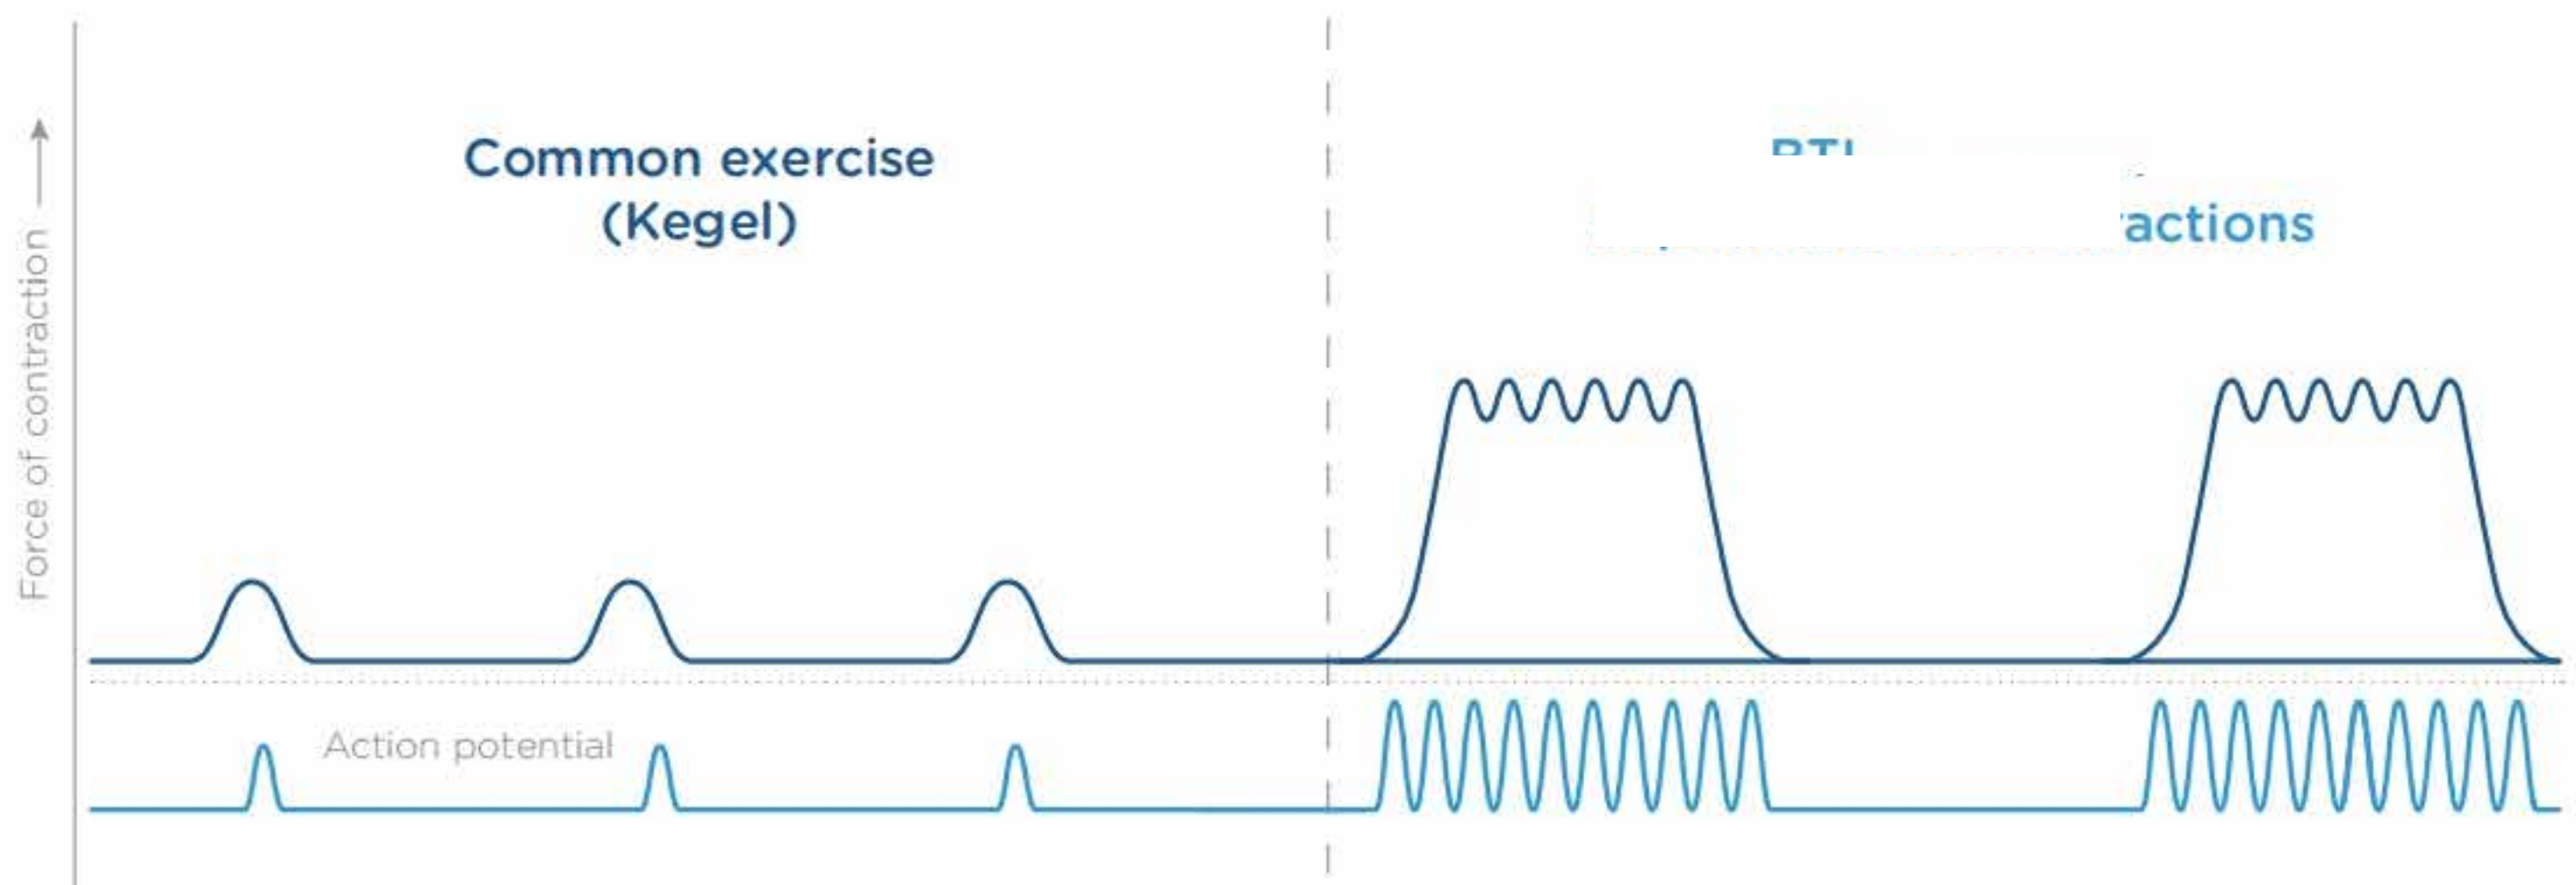

Pelvic Trauma

Theory

Myogram

EM BELLA utilizes High-Intensity Focused Electromagnetic technology (HIFEM) to cause deep pelvic floor muscles stimulation and restoration of the neuromuscular control.

Key effectiveness is based on focused electromagnetic energy, in-depth penetration and stimulation of the entire pelvic floor area.

A single EM BELLA session brings thousands of supramaximal pelvic floor muscle contractions, which are extremely important in muscle re-education of incontinent patients.

Backed by science

NO PILLS, NO PADS, NO SURGERY

This unique technology revolutionizes the women's intimate health and wellness category by providing those suffering from incontinence with a completely non-invasive option.

BEFORE

Pelvic floor muscles insufficiently support pelvic organs and affect bladder control.

TREATMENT

EM BELLA effectively stimulates pelvic floor muscles with thousand of contractions per session.

AFTER

Stimulation leads to regained control over pelvic floor muscles and bladder.

A course of treatment needs 6 sessions, each session only takes 30 minutes, scheduled twice a week.
